Career Objective

As an AI and Machine Learning student eager to gain practical experience, I look forward to applying my coding skills in C, C++, Java, and Python in a hands-on role. I am seeking opportunities in the tech industry where I can learn, grow, and contribute to meaningful projects.

Experience

Project Intern – L&T Technology Services
Mysore, Karnataka | 16 January 2026 – 8 May 2026
Contributed to a BMW automotive engine project, applying AI/ML techniques for performance analysis and predictive maintenance.
Worked on duplicate data detection and optimization tasks, improving accuracy and efficiency in structured data systems.
Gained practical experience in data preprocessing, model integration, and collaborative development practices within a professional engineering environment.

skills

- Programming: Python, C, C++, Java.
- AI/ML: TensorFlow, PyTorch, Scikit-learn.
- Data: SQL, Pandas, NumPy, Visualization.
- Cloud/Deployment: GCP, AWS, Docker, Kubernetes.
- Tools: Git/GitHub, VS Code, Jupyter.
- Core Areas: Machine Learning, Deep Learning (CNN, RNN, LSTM), NLP.

Education

B.E. in Artificial Intelligence and Machine Learning	**CGPA:7.5** Vidyavardhaka College of Engineering, Mysore 2022 – 2026
PUC (PCMB)	**Percentage:70** Gopalaswamy Shishuvihara Pu college , Mysore 2020 - 2022
SSLC	**Percentage:69** Sri Sharadha Public School, Mysore 2019 – 2020

Certifications

•Google cloud: cloud engineer track and also completed student learning assessment.

• Infosys Springboard: Basics of Python, Programming using Java

• Cousera: Strategic Leadership and Management, Software Development Lifecycle (SDLC), Introduction to Operating Systems, Alibaba Cloud Computing, Big Data Modeling and Management Systems, Machine Learning, Introduction to Data Engine, Python for Data science, AI and Development, Creative Designing in Power BI, NLP.

• HTML and Javascript

• l&t: information security management system, data privacy.

Achievements

- I have received balashree award for my drawing and painting works.
- Published research paper “demonstrating how transformer architectures outperform traditional CNNs in tracking moving objects in video streams” and “Why Transformers Work So Well ”.
- Built a model on this "Build Your Own Robot 1.0" course.

  And done some mini projects on:
- Solar Light Detection & Optimization System – Designed an AI-powered model to monitor solar intensity and optimize energy usage in smart grids.
- Fraud Detection System – Built ML models to identify duplicate or suspicious transactions in financial datasets.
- And also have created many dashboards on computer networks, power BI and machine learning models.

Strengths

- Innovative – Creative in designing solutions and improving workflows.
- Leadership – Capable of guiding peers and contributing to group success.
- Analytical – Skilled at breaking down complex problems and identifying efficient solutions.
- Adaptable – Quick to learn and adjust to new technologies, tools, and environments.
- Collaborative – Effective in teamwork, with clear communication and coordination skills.
